Flashcards

▼ How do you execute a Bash script in Linux?

Open Terminal, navigate to the script directory (if needed), make the script executable using chmod `+x script_name.sh`, then execute it with `./script_name.sh`.

▼ What is the `objdump` command?

The `objdump` command is a utility that disassembles object files, which are binary files that contain machine-readable code.

Steps

1. I downloaded the binary file and the bash script.
2. I gave the bash script the execution permission using the command `chmod +x ltdis.sh`
3. I executed the bash script using the command `./ltdis.sh` and I got info about the usage of this bash script `ltdis.sh <program-file>` and it turned out that it’s a script

that disassembles a binary file using `objdump` command .

```
┌──(kali㉿kali)-[~/Downloads]
└─$ chmod +x ltdis.sh

┌──(kali㉿kali)-[~/Downloads]
└─$ sudo ./ltdis.sh
Attempting disassembly of  ...
objdump: 'a.out': No such file
objdump: section '.text' mentioned in a -j option, but not found in any input file
Disassembly failed!
Usage: ltdis.sh <program-file>
Bye!
```

4. So I ran the command `ltdis.sh static` (the bash script followed by the binary file) and it generated a new file.

```
┌──(kali㉿kali)-[~/Downloads]
└─$ sudo ./ltdis.sh static
Attempting disassembly of static ...
Disassembly successful! Available at: static.ltdis.x86_64.txt
Ripping strings from binary with file offsets...
Any strings found in static have been written to static.ltdis.strings.txt with file off
set
```

5. I used the command `cat` to see the content of the new file I got and I found the flag.

```
┌──(kali㉿kali)-[~/Downloads]
└─$ cat static.ltdis.strings.txt
    238 /lib64/ld-linux-x86-64.so.2
    361 libc.so.6
    36b puts
    370 __cxa_finalize
    37f __libc_start_main
    391 GLIBC_2.2.5
    39d _ITM_deregisterTMCloneTable
    3b9 __gmon_start__
    3c8 _ITM_registerTMCloneTable
    660 AWAVI
    667 AUATL
    6ba []A\A]A^A_
    6e8 Oh hai! Wait what? A flag? Yes, it's around here somewhere!
